

# The ParaSCALE Lite-SL

Patent Pending

Parafour brings a new level of safety assurance to cylinder filling, whether a single scale station or multiple manual filling points. With positive flow stop when full, you can take comfort in knowing that you will never have an over-fill situation again. OPD's fail, not everyone uses a bleeder. Fill station operator oversight is not always perfect. So whether a single dispenser scale at your gas office, multiple scales on a filling dock, or even at your re-sellers location, the ParaSCALE Lite-SL will let you fill with confidence.

All Explosion proof Class 1, Division 1, no exposed wires to get snagged, no bulky arrangements of multiple boxes, switches, relays and conduit. The ParaSCALE Lite-SL is clean simple, easy to install and adjust, and most importantly, COST EFFECTIVE!

Installation takes about 30 minutes. Does not affect scale operation. It mounts to standard Fairbanks filling scales (more applications coming).

Simply adjust the scale as for a normal cylinder fill operation. Place the cylinder on the scale and connect the nozzle. Touch the key point with the operator wrist lanyard key, and open the fill valve.

Once the scale tips at the set weight, the scale can either, turn off the motor, close a flow control valve, and turn on a "Fill Complete" indicator lamp. The lamp will remain on until you are ready to start a new fill, or when the standby time out is reached. Simple, Safe and Effective.

With the patent pending ParaSCALE micro controller, all functions are solid state control, designed with years of trouble-free service.

## ParaSCALE Lite is available in three different models!

**P4-ParaSCALE Lite** For single scale site; shuts off motor starter coil wire to turn off pump motor when the scale arm full setting is reached.

**P4-ParaSCALE Lite-S** ParaSCALE with 1/2" solenoid for single scale operations, where pump may need to remain running for other application. Closes solenoid when full level is reached.

**P4-ParaSCALE Lite-SL** ParaSCALE with 1/2" solenoid and stop indicator lamp, for multiple scale operations. Closes solenoid and turns on finish lamp when full level is reached.
